

DRAAISMA
TECH

PORTFOLIO

ABOUT US

Draaisma Tech is a senior software engineering company focused on designing, building, and maintaining reliable software systems using open-source technologies.

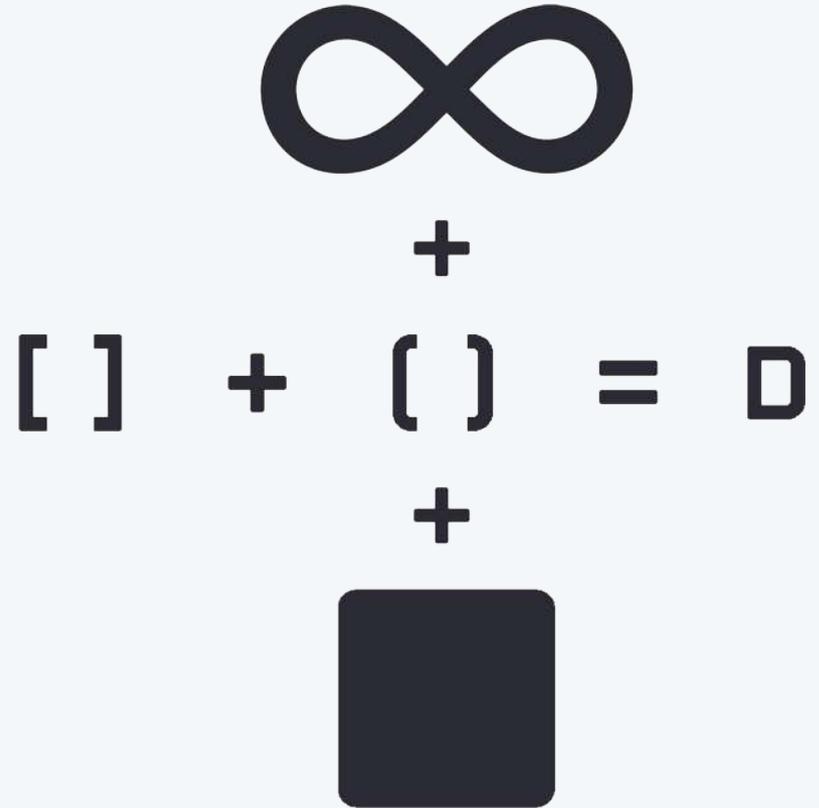

The company works with organizations worldwide, providing experienced, pragmatic engineering without the overhead and friction of large outsourcing agencies.

The focus is on **long-term reliability, clarity, and maintainability** — building systems that work today and remain stable as they evolve.

LOGO DESIGN

A **TIMELESS** symbol design for **LASTING** solutions

The Draaisma Tech symbol aims to represent **lasting solutions**, which is expressed through the **INFINITY** symbol. This symbol is incorporated into the logo by combining **two letter "D"**, which in turn is formed by combining the **BRACKETS** and **PARENTHESES**, making it relatable to programming. Finally, the shape of a **SQUARE** was adopted, representing **reliability, trust, and security**.

WHAT WE DO

Draaisma Tech provides senior-level software engineering services across backend, full-stack, mobile, cloud, and infrastructure projects.

All work is delivered remotely, with clear communication, documented decisions, and a strong emphasis on open-source technologies and proven engineering practices.

Clients typically engage Draaisma Tech when they need:

- An experienced engineer they can trust with critical systems
- Help stabilizing, scaling, or extending existing platforms
- Reliable outsourcing without losing technical ownership or clarity

DRAAISMA
TECH

SERVICES

Small Feature / Fix

4-day delivery

A focused implementation of a single backend feature or small UI module with minimal architecture and design.

Includes design customization, content upload, responsive layout, full source code, and clearly documented, well-commented implementation.

SERVICES

Business Feature

10-day delivery

Implementation of a new feature with required integrations, including a fully responsive UI, backend logic, and automated tests.

Suitable for moderate complexity projects, with design customization, content upload support, complete source code, and detailed documentation.

SERVICES

Full Module / Mini App

14-day delivery

Delivery of a complete feature set with technical documentation, CI/CD setup, and deployment support.

Includes architecture guidance, design customization, content upload capabilities, responsive implementation, full source code, and clear, detailed documentation.

SERVICES

MVP & Proof-of-Concept Builds

14-day delivery

Rapid development of MVPs and proof-of-concepts to validate ideas and reduce technical risk.

From architecture and core features to deployment-ready builds, delivered with a focus on speed, quality, and a clear path to future scaling.

SERVICES

Consulting & Technical Advisory

Daily rate

Senior engineering consulting focused on architecture, delivery, and team effectiveness.

Includes system and code reviews, technical roadmapping, CI/CD and DevOps guidance, and hands-on mentoring or temporary technical leadership — delivered fully remote.

SERVICES

Architecture & Code Audits

4-day delivery

Independent technical reviews of your system architecture and codebase to identify risks, bottlenecks, and improvement opportunities.

Includes actionable recommendations on scalability, security, maintainability, and delivery practices — ideal before scaling, refactoring, or major releases.

SERVICES

DevOps & Cloud Infrastructure

Daily rate

Design, setup, and optimization of secure, scalable infrastructure using Linux, Docker, and Kubernetes.

Includes CI/CD pipelines, cloud and on-prem deployments, monitoring, and security hardening to ensure reliable, production-ready systems.

SERVICES

UX/UI Design & Prototyping

14-day delivery

User-centered UX/UI design from concept to high-fidelity Figma prototypes.

Includes user flows, wireframes, visual design, and interactive prototypes, ensuring intuitive experiences and smooth handoff to development.

SERVICES

Technical Documentation & User Manuals

14-day delivery

Clear, well-structured technical documentation and user manuals that make software easy to understand and maintain.

Includes system documentation, developer guides, user-facing manuals, and onboarding materials tailored for remote teams and long-term maintainability.

SERVICES

Maintenance & Ongoing Support

Monthly service contract

Reliable post-launch support to keep systems secure, stable, and up to date.

Includes bug fixes, security updates, dependency upgrades, monitoring, and minor improvements, with flexible availability and priority response.

SERVICES

WordPress Hosting & Email Services

Monthly service contract

Reliable hosting for WordPress websites with secure, well-maintained infrastructure and professional email services.

Includes setup, updates, backups, performance monitoring, and basic support — ideal for businesses that want a stable, hassle-free online presence.

HOW WE WORK

Draaisma Tech works as a **trusted engineering partner**, not a body-shop.

Projects are approached with clear scope, realistic timelines, and direct communication. Clients work with a senior engineer from start to finish, ensuring accountability, consistency, and technical clarity.

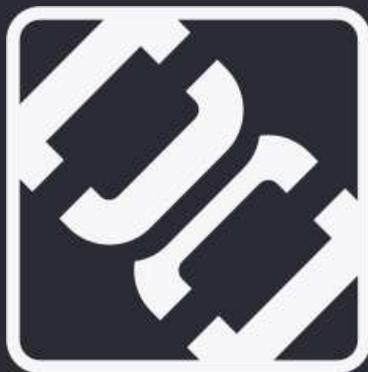

WHY DRAAISMA TECH

- Senior-level engineering without agency overhead
- Open-source, vendor-neutral technology choices
- Clear documentation and maintainable code
- Reliable delivery for remote, distributed teams
- Calm, professional communication

ENGAGEMENT

Services are available as **fixed-delivery packages**, **daily consulting**, or **monthly contracts**, depending on the nature of the work and client needs.

If you're looking for reliable, senior software engineering support to build, stabilize, or evolve your systems, Draaisma Tech is ready to help.
